

Are you ready for the next generation of PetPoint?

As the leading provider of management software to North American animal welfare organizations (AWOs), Pethealth's mission continues to focus on proactively delivering innovative solutions to meet the rapidly changing needs of AWOs and the industry as a whole. Today, nearly 1,600 shelters and rescues are powered by the PetPoint Data Management System and ongoing feedback from our growing network of clients continues to drive new development.

Pethealth is pleased to announce the upcoming launch of Release 4.0 of PetPoint Data Management System. Release 4.0 of Lite and Professional (formerly SMS) will have new functionality and tools to further improve our service to you.

PetPoint Data Management System Release highlights:

Intake - Owner/Guardian Surrender Person: William J. Brown

Intake and Outcome Redesign

Intakes are merged into a single tab-style screen to simplify and improve navigation throughout the intake process. Noticeable improvements have been made to multi-animal intake functionality, separating "copy animal" from "copy intake" to provide greater flexibility. The same merging and enhanced functionality made to intakes has also been applied to outcomes.

Medical Redesign

Significant rework of existing screens within PetPoint's Care menu has improved the overall usability.

- Ability to better track historical medical information as well as schedule future care the animal needs.
- A new integrated medical screen will now record exams and any surgeries done - not just spay/neuter.
- The combination of procedures and medications resulting in treatment; treatment will also include food and tasks.
- A simplified process for follow-up tests, vaccinations, and treatments needed and/or the ability to have PetPoint automatically perform the process.
- A new tab-style Exam/Surgery screen supporting the same improved multi-animal functionality from intake/outcome, including simpler navigation, and allowing any updates to an animal to take place within either screen.

Animal Group (New Module)

This new module allows organizations to create and manage their own animal groups, such as **litters, playmates or placement partners**. Additionally, system-created groups (intake, outcome, etc.) are accessible along with lookups of groups, streamlining the management of multiple animal records within an animal group.

Animal Redesign

An improved tabbed interface has been introduced merging *Animal Details, Profile, Memos, Microchip, Pet IDs, Vouchers, Waivers, Holds, and Stage/Location* into *Edit Animal*. In addition, a new "Express" Animal screen allows users to quickly create and update the core sections of an animal's record. Users will now be able to load an animal record and update it from one screen. Additional enhancements to the animal module include new advanced animal descriptor drop-downs and microchip scan recordings.

Person Redesign

Person details, Contact points, Memos, Associations, Profiles, Relationships, and the Petango Application are merged into *Edit Person* with the new tab-style interface. A new "Express" Person screen allows users to quickly create and update core sections of a Person's record. Users will also be able to load a Person record and update it from one screen.

Foster/Ownership Redesign

Tabbed and reorganized to follow the new approach similar to Intake/Outcome, users will now be able to:

- place animals on a pending list without having a foster parent;
- skip the pending/scheduling steps if the animal is going to foster immediately;
- quickly check in/out multiple animals for a specific foster parent;
- provide an option for multi-animal contracts

Licensing Redesign

Licensing is being reorganized to match the same design as intake/outcome and will also include functionality for **multi-jurisdictional licensing and license requirements**.

Online Licensing (New Module)

This fee-based module provides a web interface that allows organizations to **sell pet licenses online**. Licenses and records can be managed directly in PetPoint with customer and animal information hosted in one central location.

Reports

With each module redesigned or created, reports will be restructured using all of the newest features and providing additional functionality such as click-to-sort and multi-select parameters.

Netbook and Tablet Design Optimization

The design of Release 4.0 has also been optimized to allow users to access PetPoint via netbooks or tablets.

Sounds great! Now what?

Contact the PetPoint team for a demonstration of the PetPoint Data Management System at 866-630-7387, or visit www.petpoint.com and click on the "Get Started" button for an online demonstration today!
