

# PetPoint

DATA MANAGEMENT SYSTEM

PetPoint Solutions is proud to introduce **Advanced Productivity** for PetPoint Lite, Professional, and Enterprise which further supports and streamlines your organization's operations.

PetPoint Solutions is proud to introduce the new Advanced Productivity Suite for all versions of PetPoint. The Advanced Productivity Suite includes the following modules to further support and streamline your organization's daily operations:

### File Storage

Is your organization buried in paper files? Wouldn't it be easier to access lab documents, extra photos, surrender forms and other files directly within PetPoint, without the need to store a physical hard copy? File Storage is your solution! Upload files of various types (documents, PDF's, pictures, videos) and size and

attach them to a person, animal, agency, or operation (intake, outcome, medical, case, etc.) record directly from PetPoint. Once stored, files can be accessed anywhere and anytime, allowing you to ditch those file cabinets for good!

### Electronic Signature

With this module, consumers are able to sign on a tablet, smart phone, touch pad or signature capture device and then store the contract or form in its entirety within PetPoint. File Storage or File Storage plus E-Signature are available as separate add-ons or as part of this Suite.

### Mobile Access

Access PetPoint from your favorite phone, tablet, or other mobile device to perform a variety of activities! Users can perform animal inventory walks (paperless "nose counts") and quickly view a summary of each animal in your care. From there, users can drill-down into animal details to make changes, add photos (from camera-enabled devices), and update follow-ups for each animal. Enhancements include alerts that can be programmed in the site to remind users of an upcoming or incomplete walk, or scheduled to-do's per animal.
