

Advanced Productivity Suite

Advanced Productivity Suite is now available for purchase and includes the following functionality:

FILE STORAGE

Is your organization buried in paper files? Wouldn't it be easier to access lab documents, extra photos, surrender forms and other files directly within PetPoint, without the need to store a physical hard copy? File Storage is your solution! Upload files of various types (documents, PDF's, pictures, videos) and attach them to a person, animal, agency, or operation (intake, outcome and medical) record directly from PetPoint. Once stored, files can be accessed anywhere and anytime, allowing you to ditch those filing cabinets for good!

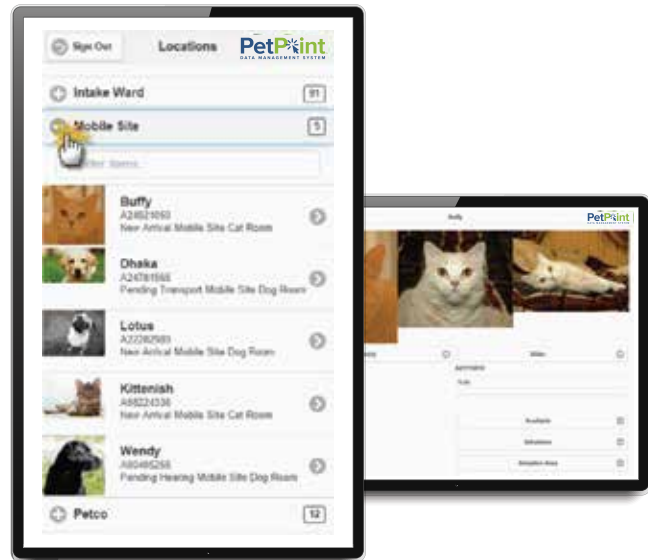

ELECTRONIC SIGNATURE

With this module, consumers and organization staff are able to digitally sign on a tablet, smart phone, touch pad or supported signature capture device and then store the contract or form in its entirety within PetPoint. After the signature is captured, the contract or form can be easily emailed to the person listed on the operation form.

MOBILE INVENTORY

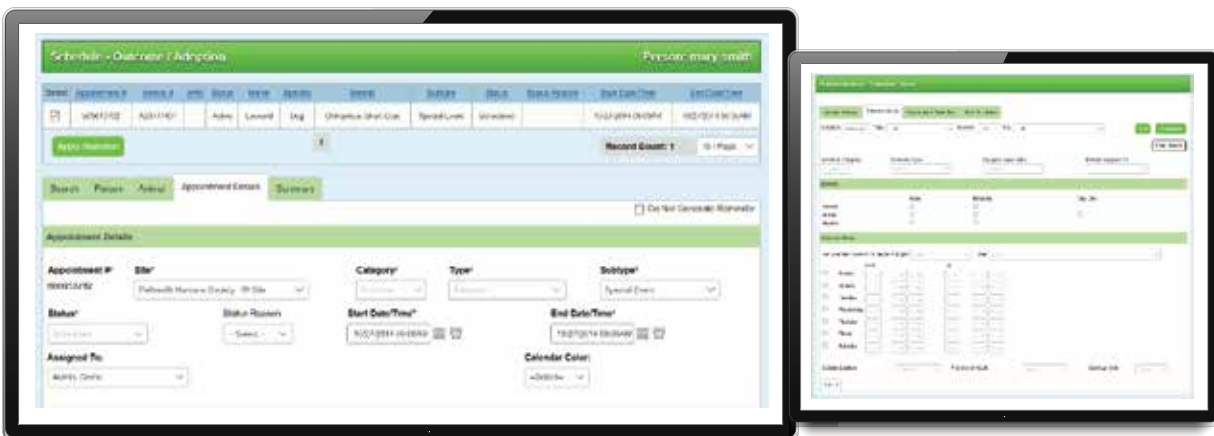

Access PetPoint from your favorite tablet or device to perform a variety of activities. Users can perform animal location checks (including photo, description, and daily to-do lists) and quickly view a summary of each animal in your care. From there, users can drill-down into animal details to make changes, add photos (from camera enabled devices), and update follow-ups for each animal. In addition, animal location verifications can be stored for historical reviews.

ADVANCED SCHEDULING

Basic scheduling includes a tabbed layout, embedded person and animal tabs, enhanced searching, and supporting multiple animals on a scheduled appointment. Additional functionality includes a visual calendar layout, supporting appointments for agencies, and allowing for custom calendar rules per appointment type and subtype.

Advanced Scheduling builds on the basic functionality to include the ability to link operations (such as intake and outcome) to the calendar. Each operation has the same custom calendar rules available in basic scheduling. Configuration options include the ability to define calendars based on time. Appointment Reminders are automatically emailed to the clients based on the reminder setup for appointment type and subtype.

For more information, pricing, or to schedule a demo please email enterprise@petpoint.com or call **1-866-630-PETS (7387)**.
